CLIPS, QUOTES, AND COMMENTS is issued about every six weeks, or as the news demands, by the Borderland Sciences Research Associates, 3524 Adams Avenue, San Diego 16, California. Sample copy on request. Most back issues available. Twelve issues for $5.00; six issues for $2.50; two issues for $1.00. CQC alternates with Round Robin, so that one or the other is published about every three weeks (according to the news on hand).

Meade Layne, M.A., Editor and BSR Director.

THE GOAD OF THE NEMATODE

by
Gaston Burridge

What is life? Probably there are as many answers as there are answering. Like electricity and gravitation, we feel sure life is, but we do not know what it is. One of the many things concerning our day is the effect gamma radiation will have on life - our life - all life. Not only are we worried about the radiation from atomic bomb testing, but also the radiation which will necessarily come from atomic power waste materials. Gamma radiation is a very new fire - hot and horrid. Like the goblins, "It's agoin' ta git us if we don't watch out!" And just perhaps - it has already got us!

But though atomic radiation may have us, recent experiments indicate that radiation has only slight effect upon some strata of life - namely that kind of life which inhabits nematodes. Nematodes are the bane of our farming men's existence. They are worm-like parasites which destroy millions of dollars worth of farm crops every year. The nematode family is large. Some of its members are beautiful to look upon - and strangely, golden in coloring. Another kind of gold to confound mankind! But the nematodes have something in their makeup which men would like to have - besides the gold - and may have to have to survive his own atomic tinkering. What does the nematode have we haven't got? Merely that these little golden creatures can sustain a dose of gamma radiation which would kill 180 humans consecutively with some radiation left over!

A "roentgen" is the accepted measure of gamma radiation. It is like a pound for measuring weight, or a gallon for measuring water. A radiation dosage of 650 roentgens is considered lethal to mankind. But it takes 120,000 roentgens to kill a nematode!

There are many varieties, or species of nematodes. One sort can take 350,000 roentgens of radiation before succumbing. Still another type did not die until receiving 640,000 roentgens!

The female of the golden nematode can withstand up to 20,000 roentgens before even being made sterile! Thus, it would seem quite likely man could not wholly denude this Earth of all life with his atomic fiddling - though he may well rid it of his own kind.

Different species of nematodes cause our farmers untold harrassment. The United States Department of Agriculture has been searching diligently for years to find ways to effectively destroy nematodes. Radiation isn't one of them! Sufficient radiation to kill the golden blight kills the plants on which they feed, long before. But perhaps the nematode has done mankind an immeasurable favor. This, by showing us "life" can have protection against radiation to far greater extent than realized before. If so, it is a signpost we should read well, and a direction we should perhaps follow carefully.

There are two ways by which any body - organic or inorganic - can prevent radiation damage. One way is to stop the radiation from entering at all - by shielding itself fully, or nearly so, against it. In other words, by setting up an effect against the radiation such as lead or the metal, hafnium, does. The other way is to allow the radiation complete, unobstructed passage through itself. Radiation appears to do little harm to anything which does not impede its progress.

At present, Science appears to believe the reason human life cells are damaged by radiation is because they try - unsuccessfully - to prevent the passage of the rays of radiation through themselves. They try to form a shield. They attempt to stop the radiation's progress - and die trying.

If this be true, does the nematode know how to build a better shield than we, or does it merely present a much poorer one? In either case, we should be interested. If the nematode is able to construct a better shield than our cells can, it would seem highly proper we learn how such a shield is arranged. Then we should attempt a duplicate. If the nematode's equipment allows a much freer passage to the radiation, then should we not try to learn how and why in order that we may attempt such protection for ourselves - if at all possible in our much more complex cell arrangement?

"Life" appears to be a product, a condition, a result, within the molecule - a molecule being a combination of atoms - rather than a condition within or of a single atom. Upon just what that product, condition or result depends on, man has not yet been able to lay his finger. All atoms appear to be alike, whether involved in organic or inorganic functions - whether playing their part in the animal, vegetable or mineral kingdoms. As far as we now know, an atom of carbon and an atom of iron are as compatible in a human body as in the bumper of your automobile, but their molecular compatibility may or may not be very different!

Thus, it would seem - unless "life" is a varying condition, unless those structures possessing it also possess more or less of it - we might not need to probe deeper for our radiation answer than the molecule. If, of course, varying degrees or amounts or kinds of "life" exist, then we have an infinitely greater task - a much more profound puzzle to solve. In fact, we have more than one puzzle to solve!

It certainly has not been proved that "life as we know it," originated on this planet. Buried among the many "damned to oblivion events" is the evidence brought to Earth in a meteorite once. That something contained in the meteorite appeared tremendously like the same thing we find in our own Earth rocks which we call "fossils." Fossils are supposed to have been "alive" at one time - and alive with the same kind of life "as we know it to be and to have been here." This does not prove anything, of course, except that we do not know very much, and can possibly learn something from the little golden worms we call nematodes.

"Life" may be one of the forces of Creation - like energy and time. If so, its unit maybe extremely small - but quite persistent, like those of energy and time. Experiments seem to indicate life can have its animation suspended for long periods without detrimental effect upon its ultimate movement - witness the tulip bulbs placed in the deep freeze for several years which bloomed along with the last-year bulbs not deep frozen at all.

Some units of life manage to maintain for centuries, examples being the great Redwoods of California, and the still more 'longevous' Arizona Bristle Cone Pines. But in another sense, some life units can be thought of as never dying! Watch them under a microscope. They are tiny circles of stuff almost the color of the liquid in which they float. Soon a circle begins to elongate. Then it narrows toward its middle. Finally, it breaks in two - each part repeating a like process many times while one watches. How long has this been

going on? How long will it continue? Always and never are short words attempting to describe ultimates - but our paper must be brief!

Can we wonder then if the price we pay for our supposedly having "intelligence" enough to create a radiation problem, is lack of ability to sustain its results?

And once again we wonder....is the relationship of intelligence and life - at least mobile intelligence and mobile life - necessarily doomed to radiation per se, or can the combination which produced the radiation protect itself from it? It would appear that, "what though the field be lost - all is not lost," is just as true as, "what though the field be gained - all is not gained!"

So perhaps this minute worm-like parasite of plant and animal life we call the nematode can help as well as plague us. Someone once said something, didn't they, about it being an ill wind which blew no one any good?

-*-*-*-*-*-*-*-*-*-

Editor, CQC:

I have returned from Tennessee and a fruitful journey. The enclosed is a result of part of that journey - the first result of it. I thought this would interest you and your readers. It appears "life" is pretty hearty after all - though not necessarily human life!

I have uncovered many things. Some of them will require further looking into, but there is much writing potential here.

I found Oak Ridge tremendous - and I saw only a fraction of it. Scuttle-butt has it that a great deal of what is there is under the mountains! I do not doubt it. The research facilities are almost a city in themselves. I only hope they know what they are doing - or at least enough of what they are doing..... !

G.B.

-*-*-*-*-*-*-*-*-*-*-*-

To amuse and instruct:

THE MAN WHO SAW GOD

Once upon a time, a man died and after he had been dead for two months, scientists perfected a method of bringing people back to life with chemicals and hormones and things.

So they brought the man back to life, and the first thing they all asked him, when he became conscious again was: "What's Heaven like? What's God like? Please tell us. You've been there." But the man just wanted to be let alone. They kept begging him: "Please tell us what is the nature of God."

"Ask me anything else," the man said, "but not that." Hundreds of important people kept coming and pleading with him. "Look," he said, "if I told you, it would take you two hundred years to adjust. Please leave me alone."

But they kept nudging him, and finally his patience gave out. "All right," he said, "but I warned you. First of all, She's colored..... !

PHOTOGRAPHY IN THE ETHERS

by
H.D. Clark

(Following the publication of Trevor James' book, They Live in the Sky, there has been much experimenting and some very striking results in "etheric" photography. It is in response to this interest that BSR publications printed the letter quoted below, and will welcome other reports from competent investigators. Assoc. H.D. Clark can be reached at Box 484, Yucca Valley, California).

ML

Meade Layne, Editor:

In a recent issue of Round Robin you mentioned the matter of reports of sky phenomena seen by or known to members. There is a continuous play of activity here which has gone on for some time and seems to be progressive in nature, that is, tending to become very gradually more definitive.

This activity is being photographed by Doris LeVesque of Joshua Tree at or near her residence a few miles from here. She may make a series of shots in quick succession and/or scattered shots during a week. In her home a mental impression will draw her attention from whatever she is doing to an awareness of something, perhaps a force field, outside. Taking a camera outdoors, nothing can be seen visually, but an outstretched hand will receive a sort of vibratory sensation. Holding the camera by hand, using the reflex viewer only to frame the horizon or objects for reference, she will count in approximate seconds to ten and trip the shutter precisely on that count. No results can be known until the film has been processed. Film is Verichrome Pan., in standard 120 roll, 12 negatives of $2\frac{1}{4}$ x $2\frac{1}{4}$ size each. Focus is set at "infinity," exposure 1/50 sec. at F 5.6 with a polarizing filter. The polar filter is to cut out light reflections and stray rays and beams which are said by skeptics to explain away all such "blips" in a picture.

Result: The first one or two shots on a roll may show nothing, the next immediately following, one or two dark round balls and after that up to a dozen per frame (occasionally many more). These are in assorted sizes, many show obvious motion, some surrounded by a halo of light, some with dots in the center, many variations of darkness or distinctness. On some frames these balls follow the path of a vertical streamer of light toward the earth. Recently at request of Doris, they have formed a fairly identifiable signature of initial letters.

It is only natural that the "Sunday Experts" start experting (and have) about these photos - "bubbles, water drops, dust spots," etc. Now it happens that I process the film and make the prints in my home, taking the rolls as they come from the camera, no other hands touching them. My background for this and sole contribution is a lot of years in professional photography, glass plates to movies, photo instructor under the Chicago Board of Education in film, glass, paper base and transparency emulsion processing. The Visual Education Dept., of the Junior College system there is using quantities of slides and large transparencies in instruction which I made in the college lab.....same for the Chicago Art Institute - nary a bubble.

For that matter, THE SAME PHENOMENA APPEARED in a roll of Ektachrome (her only one), which Doris had processed in a commercial lab, as I do not process color film. Skeptics have not explained away that one yet.

The important thing, as it appears to me, is that Doris LeVesque's method is fully directed all the way and as such is far and away the opposite of random shooting at the sky in hopes of capturing something by pure chance.

For the time being prints are not offered due to the continuing nature of the phenomena.

H.D.C.

-*-*-*-*-*-*-*-*-*-*-*-*-*-

SECRET CAMERA LOOKS INTO PAST

The Miami Herald said tonight the Air Force has developed an infra-red camera which literally can reach backward into time for a picture.

In a copyrighted story from Eglin Air Force Base, Florida, the Herald said the camera took a picture late at night from a reconnaisance plane of an empty parking lot and came up with a picture of cars which had been parked on the lot hours previously.

"Test officials at this air proving ground center explained that the camera absorbs heat rays, emitted by solid objects, instead of light rays, to record its picture," the story said.

"Extremely sensitive equipment which can distinguish in thousandths of a degree of heat registers the picture by heat contrasts of objects in the picture.

"For instance, the cars on the parking ground would radiate more, or less, heat than surrounding objects, or the cement lot. The greater the heat contrast, the easier it is to take the picture."

The story said although the parking lot was empty, the retained heat patterns of the previously parked cars were picked up by the delicate equipment and translated into an astonishing picture.

The Herald said the camera was developed primarily as a reconnaisance device and that concealment from the camera of bivouac areas, parks, tanks, airplanes or anything by usual camouflage measure is nearly impossible.

The Herald story quoted test officials as saying that because of the highly classified nature of work going on with the infra-red camera, they could not disclose how far backward into time a picture can be taken.

(Credit for this article goes to Assoc. T.U. Moore who, no doubt, joins BSRA in referring the Air Force test officials to the long-standing research data of the George Delawaar Laboratories).

-*-*-*-*-*-*-*-*-*-*-*-*-*-

(From a late note too late to quote: "The Inglewood fault is the terror of geologists and many papers at UC indicate that it is ready to go" ...

THE GALT SAUCER REPORT

This sighting took place on July 30, 1957, and was fully described in Saucers, Space, and Science, Nos. 4 & 5 of May and July of 1958; Gene Duplantier, Editor, 1157 St. Clair Ave. West, Toronto 10, Ontario, Canada. These issues of S.,S.,& S. contain much interesting material, besides the study of the Galt report, and our quotations are passim: (3 issues, $1.00)

M.L.

Mr. S.J. Hartman, F.R.C., S.T.D., PH.D., D.SC., who runs a chemical ground-analysis laboratory in Galt, found evidences of man-made physical properties in the ground at the landing spot, but there was also something he wasn't sure of. Mr. Hartman and his associates removed samples of the burned grain stubble, the ground, and took tests of the three-toed markings found where the saucer hovered. Further tests were conducted, especially in germination. If grain areas affected by the burned spots, or the rumored radiation develop much quicker, he said, it might prove the radiation to be beneficial. Keep in mind that exposure to the one area for a time gave a slight purple tinge to the skin, as reported by several people, including Jack Stephens, the witness to the landing.

On April 6, 1958 Homer Schaefer and I visited with Mr. Hartman to find out the results of his tests. In brief they were as follows:

1. Soon after the saucer took off, soil samples were tested under a microscope. A blue-purple radiation was observed, being attracted to the north, no matter what direction the microscope was turned, using soil from the three-toed print. Soil a fraction of an inch from outside the area gave no effects at all.
2. Using an instrument to tell pressure of the soil, he had pressed the device into the earth. It went in about 1 inch before pressure registered. But, where the soil in the print should have been compressed and much harder due to the weight of the saucer, the device went down 4 inches before registering pressure. It could be described as moon-dust!
3. Soil was sealed in test-tubes. It divided itself into fine particles which went to the east side of the tube, and coarse particles went to the west side. A thin layer of earth at the top seemed to glow when put near the light. Water was also present on top.
4. When grain samples were grown, they were healthier and sturdier than the grain elsewhere in the field. More will be grown to test for mutations.
5. Ants in the scorched area were larger and stronger looking than ants in untouched areas. Also, the ant-hills themselves were much higher than the ordinary ones.
6. More of this earth was placed in a jar and sealed. A tiny spider was unfortunate to get itself into this jar the same time the earth was put in. But if the spider was to face its like-species now, it would be called a giant, because it was now about 10 times the usual size.
7. Six-inch-long nails were put in another jar containing earth from the print. Two probes were put on the various nail-heads which were in turn attached to a galvanic meter. This is an instrument for determining the strength and direction of an electric current. When connections were made, the galvanic meter hand on the dial jumped, registering current. When the soil was fresh last year, the hand jumped the full range of the

dial. Mr. Hartman at that time was on Kitchener T.V. demonstrating with equipment which belonged to the station. His own equipment gave the same effect.

Two more tests were made for (a) continuity, (b) magnetic current. Conclusion: POLARITY IS ELUSIVE. COULD NOT FIX POLARITY. This test has been made by a Mr. J. Stauffer, a "ham" radio operator. The above test was witnessed by Mr. Mike Mathews, news announcer for Galt radio station CFTJ.

I had an idea that the saucers may be after pure water. One of the things Jack Stephens told me was that Galt water came from artesian wells. Mr. Hartman believes as I do, and has an idea they get some sort of energy from it. We were told that the whole Kitchener-Galt area was on top of one huge watershed or underground lake. He had seen signs of unusual activity along the banks of the Grand River the past few months, besides seeing the saucers on various occasions elsewhere.

WASHINGTON'S BIGGEST SECRET:

The United States has discovered a way of destroying the power of the atom and H-bomb while they are still in mid-air! Government scientists have perfected a Neutron Rocket that can be released either from the ground or from a plane. The rocket without revealing any information that might be of use to a foreign power, will "follow" a plane carrying an A or H bomb. The rocket fires millions of neutrons into the plane and thereby neutralizes the bomb, rendering it harmless! President Eisenhower personally congratulated the Nevada scientists who worked on the project for 8 years. Ike said it is the greatest discovery in the history of mankind. (National Enquirer)

IT'S DISAPPEARING LAWN HOSE TIME AGAIN

Have you checked your garden hose lately? It's out in the back garden, you say, where you left it last night. Don't make any bets on it because it's that time of the year again. Disappearing hose time. Nobody knows for sure when it all started but every Spring for the past several years there have been reports of perfectly tame garden hoses suddenly running amok and burrowing their way into Mother Earth.

Stan Senkrw, of Etobicoke (suberb of Toronto) - G.D.) reported the first case so far this year. His boys, Russ and Larry, left the hose running in the garden for a minute or two. When they came back, they caught it in the act of tunnelling into the ground. The boys pulled at it, so did their mother and so did Stan, but they finally had to cut it to keep it all from disappearing. Next day, Mr. Senkrw and a neighbor tried to salvage the 15 feet of hose still buried in the ground, but they couldn't budge it.

Some blame leprechauns and gremlins, others of a more scientific bent explain it away in terms of vacuum, suction and physics. But whatever it is, the end result is the same. Comes the dawn the hose on the lawn is gone.

People who study such things as disappearing hoses say it's all very simple. The jet of water from the hose digs a little hole in the ground. The hose slips into the hole and water keeps hollowing out a space in front of it in the earth. Most of the water is absorbed into the ground and leaves a partial vacuum around the nozzle. The result: suction which pulls the hose deeper into the hole, as it draws outside air into the vacuum. It's still easier to blame it on the gremlins. (By Mike Steers, The Telegram, June 5/58)

VERY MYSTERIOUS CREEPIE-CRAWLIES INVADE HOME

Goteberg, Sweden (AP) - Bugs, defying all biological classifications, have moved in on a 67 year old woman and her 35 year old son. The house has been fumigated 4 times, but the creepie-crawlies are still in possession. Plans by the board of health to give the 2 victims a rubdown in the public baths were loused up by municipal authorities as they claimed it was too risky. (Vancouver Province - May)

-*-*-*-*-*-*-

Central Intelligence heard rumblings in Moscow that a spy system inside the United States is set up to kidnap or execute almost every key radar scientist in the United States if war is declared. That's why all key radar men were placed under 24 hours a day F.B.I. guard only a week ago! (National Enquirer - July 27/58)

-*-*-*-*-

In a noon time telephone call placed by President Eisenhower to Prime Minister Macmillan in London, it was agreed that the United States and Britain will support each other 100% in the event of a World War. It also was agreed that atomic and H-weapons would be used and that the U.S. would supply Britain with everything from H-bombs to atomic cannon. ... The U.S. is working on the most revolutionary super secret project since the H-bomb. It is classified top-secret, but it is said to deal with outer space, and will give the U.S. a new and startling advantage over Russia.....

....The first space ship destined for the moon is being finished right now at Convair in Southern California....

YELLOW DYE RIDS BODY OF STRONTIUM

San Francisco, April 16, 1958 (AP) - A harmless substance which can remove radioactive strontium from the body was described to chemists today. This material could be the fore-runner of a series of compounds to rid humans and animals of other dangerous fallout products. Conceivably these things might be built into the diet as a kind of insurance against radiation damage. The anti-strontium compound was described in a paper given before the American Chemical Society by Arthur Lindenbaum of the Argonne National Laboratory at Lemont, Illinois. Lindenbaum and two colleagues developed and tested it. Radioactive strontium, the most feared element im fallout, is considered dangerous because it makes its way into the bones and can give off radiation for scores of years afterward. It is a possible cause of cancer and other diseases. The compound which can pick this hazardous element out of living bone and other body parts is a tasteless yellow dye called rhodizonate. It latches onto strontium atoms and the two substances together form an insoluble compound which can be eliminated in body waste.

FIND WAY TO TURN A-WASTE TO PROFIT

Washington, April 12/58 -(UP) - The AEC has found a way to turn deadly radioactive "wastes" into a bonanza. It is too early to appraise the dollar value of this bonanza, but there are those who believe it will soar to billions annually in years to come. By converting the radioactive waste products of atomic fission into powerful tools for medicine, industry and research, the commission simultaneously has found a safe way of "disposing" of some of the dangerous materials that until now were considered obstacles to development of a big-scale atomic power industry. A new plant at Oak Ridge, Tenn., will transform once wasted products into precious materials, starting operations this summer.

SAUCERS ARE SNATCHING OUR CITIZENS

The weird disappearance in the past three years of thousands of persons is increasingly credited to spacemen in flying saucers who seek Earthlings for scientific study. Hovering over the Earth, they are believed to use rays that exert reverse-gravitational pull which literally lifts its victims off the face of the earth. This incredible revelation explains the increased number of disappearances, (See P. 100 Col. 2.-G.D.) since the advent of flying saucers, that defy and baffle efforts of seasoned sleuths in Missing Persons Bureaus who seldom fail at least to find a trace of missing people through income tax, social security, automobile, and charge account records in every state. Many persons have been reported missing while crossing a street or an open field, and even from their locked homes. In a few identical cases, charred remains in an otherwise unburned home evidence a cruel potshot by a perhaps drunken saucer crewman carelessly using a disintegrator. Children whisked away from cribs, oldsters from hospital beds, and many automobiles with passengers are reported vanishing into thin air, to be studied and in some cases cosmically brainwashed and returned to us to prepare for the Coming of the Spacemen. (By CRISWELL)

NEW MONSTER SPOTTED IN CAMBODIA JUNGLE

Saigon, Vietnam, June 3 - An "Abominable Snowman" - without snow, has been seen in the jungles of Cambodia, a wild game hunter claims in a letter to one of the biggest newspapers in Saigon. The hunter, writing to the French language Journal de l'Extreme Orient, said the creature was nine feet high, and was accompanied by a female nearly seven feet and child five feet high. The creatures were hairy, had prominent jaws and jutting canine teeth, huge feet which left footprints like the Himalayan yeti, and walked like gorillas. "These creatures had the appearance of primitive people of a prehistoric period," the hunter said. "I am not an anthropologist and I can't say whether it was a man or a monkey, but in the thirty years that I have been a big-game hunter in Indo-China, Thailand and Burma, I have never seen a creature like that."

-*-*-*-*-*-*-*-*-*-*-

On May 4, 1958, the National Enquirer published the following letter:

"My husband dissolved into space in front of my eyes in our Brooklyn backyard three years ago. I'd sent him out to climb to the top of a clothesline pole to rescue a shirt that the wind had blown off our washline. Herman yelled that it was stuck on a rusty nail. As he reached for it, his hand seemed to disappear. Then, before my dumbfounded eyes, he was sucked up and faded altogether. I was too horrified to scream.

"I told the police, but they laughed at me. The only person who believes me is a kind, elderly man in our neighborhood who studies such strange phenomena. His theory is that my husband disappeared into an invisible atmospheric floating dimension. He says more things happen that are stranger than this. Human beings would never believe them all. He says that man is still learning and knows little about the mysteries of the elements. I am writing this because I read in the Enquirer that mysterious planetary forces are snatching up men with the purpose of studying them. I fear now that if they ever release Herman he would never be the same husband I knew. Perhaps he would be an enemy. God have pity on him. Even if my neighbors eye me strangely I can only pray and hope that they will understand and believe my story some day." (Mrs. Geo. H. Wales, Brooklyn, New York City, N.Y.)

"Flying Saucer Review"

Selected Books, (as reviewed by the Editor of Flying Saucer Review)

They Live in the Sky, by Trevor James. (New Age Publishing Co., 1542 Glendale Blvd., Los Angeles 26, California, U.S.A. 270 pages. $4.50)

This is a very important addition to the evergrowing bibliography of saucer books. The author was radio officer in the Merchant Navy on various ships, including R.M.S. "Queen Mary." In fact, his background and knowledge of communications are the basis of his approach to the subject of flying saucers. He reasoned that if an advanced civilization in space were able to come here in their space ships, then their methods of communication must be equally far ahead of our own. Mr. James had also read the works of Keyhoe, Cramp, Wilkins, Jessup, Adamski and Uncle Tom Cobley, only to find himself floundering in very deep waters. Currents were pulling him in all directions. Were the saucers friendly or hostile? Were they etheric or physical? All this and much more James wanted to find out. He eventually established communication with Ashtar, a space being of some considerable importance.

Ashtar tells James that all space people from beyond our earth-moon system are etheric. Indeed, he is told that they are friendly and have space ships which can travel at the speed of thought. They can appear to us as physical beings like ourselves when necessary and, in fact, can appear so physical that the person contacted would consider them as nothing else.

But Ashtar informs that not all of the saucers are friendly. However, he emphasizes that the real space beings from beyond our atmosphere are friendly, but states that there are some that come from the center of our earth. These are not physical, not etheric; but astral in nature. Certain of these astral saucers emerge at the South Pole. They cannot go further than the "auric envelope" of the earth, or more than 125,000 miles from the surface of the planet. Their ships have a performance exceeding anything that we have produced here on earth, but nothing like that of the etheric saucers from space.

James is then informed that there is a third group of saucers, too! These are physical like ourselves. However, their occupants are far more advanced than us. They are not hostile, but could be classed as friendly but indifferent. They are located also in Antarctica, but do not emerge from the South Pole, and are in ice-free area there. Another lot, similar to these, are to be found in the high reaches of Tibet.

Ashtar states that it is the astral type saucers that are reponsible for the monster stories in connection with UFOs. The Sutton monster case, described in Barker's book, They Knew Too Much About Flying Saucers, the green men of Hopkinsville, the hairy dwarfs of Colombia and the 13 foot monster of Garsson, Canada, were all of the astral variety.

James goes into the problems and dangers of spirit communication. He maintains that there is a similarity between all telepathic, psychic and radio communications.

To sum up: Everything comes into this book. Friendly etheric beings from outer space; astral beings from the center of the earth, who often appear as monsters and let off the most awful sulphuric stenches, and do most unethical things such as siphoning water from our lakes and cause aircraft crashes. Then there

are the highly-developed physical beings who abide in Antarctica and Tibet and who also have saucers. Yes, and I almost forgot, the space animals! The author says space is teeming with life of all kinds. Indeed, there are some fantastic photographs of space animals included in the book.

This is definitely one of the important saucer books. It is based upon the premise that the saucers are chiefly invisible and that man himself is a spiritual being. This book will cut across many currently held views, even in saucer circles; nevertheless, it contains many truths and a great deal of food for thought. Well worth the money. There are 31 of the most amazing pages of photographs.
